

In re Appln. of Specht et al.  
Application No. 09/514,711

a tension rod generally aligned with said shaft, and pivotally secured to a position on said link  
displace from said hinge axis,

whereby the application of tension in said rod relative to said shaft rotates said link  
about said hinge axis to rotate said wings relative to said legs and relative to said link  
whereby said wings are closed together to a compressed position between said legs.
